

ConsoliData

Web to Host Solutions

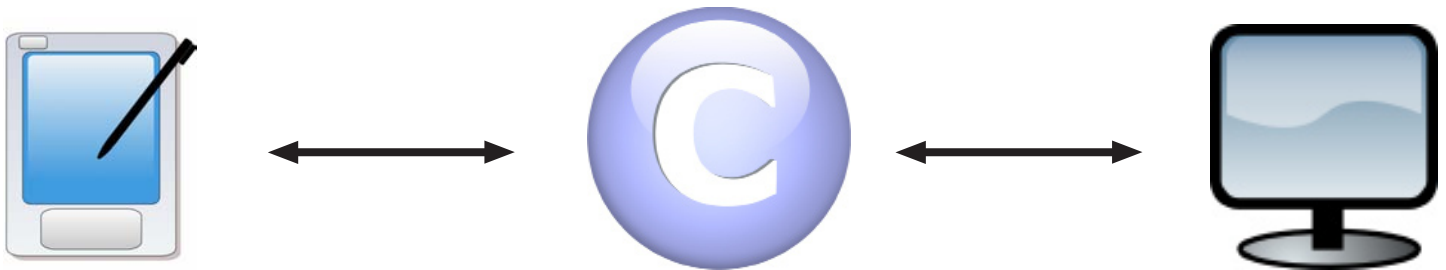

Complete Data Integration

ConsoliData is at the cornerstone of NDI Technologies core product offering, doing exactly what its name suggests. ConsoliData enables the integration of data from multiple databases/systems, consolidates the information and presents it in a compound, integrated user interface. This data can be viewed either at a desktop or deployed on a variety of mobile platforms.

With the majority of Police Forces in the UK and other government organisations already using NDI's ConsoliData as part of their data solution, we are now offering ConsoliData to other markets. The architecture behind ConsoliData is as such that it can be applied to many different business processes, providing a solution to your data requirements.

Presents Host Applications to any browser or .NET enabled static computer or mobile device

Overview

- > Integrate Data and Business Logic from multiple disparate local and remote Host Systems in real-time.
- > Create Web Services from your host-based business processes.
- > Consolidate information from multiple hosts and present it in a compound, integrated user interface.
- > Capture and store host transactions as reusable components for .NET, ERP, CRM and other systems.
- > Expose enterprise system data and functionality into any web service, application server or stand-alone system in real-time.
- > Easily create Web Services for Legacy Systems

ConsoliData middleware enables you to transform host applications and databases into next generation Web or .NET applications with unprecedented flexibility and speed.

Key Features

Compatibility and Compliance

ConsoliData is compatible with Windows 2000/2003/2008 servers, Windows XP, Windows 2000, Vista and comes with APIs, Common Objects and ActiveX controls, display and host application printing, native file transfer, and flexible keyboard mapping. ConsoliData also supports Web Services standards, including SOAP 1.1 and WSDL 1.1.

Connector Library

ConsoliData Connectors enable you to build composite applications from a wide variety of host and non-host systems including IBM, BULL, Unisys, Tandem, ICL, DEC, UNIX, Prism.

Flexible Presentation

ConsoliData applications can be presented in a wide range of formats and are accessible from Web browsers, PDAs, and other mobile devices. Presentation options include HTML, XML, WML and COM/DOM.

Green Screen to HTML

ConsoliData instantly converts IBM TN3270, TN5250, BULL, Tandem, Unix, Stratus, ICL, Prism P8/P9, Wysexxx screen-based applications into HTML pages for presentation in a browser with no programming.

Concurrent data connections

ConsoliData can connect to multiple systems and databases simultaneously, including those listed above plus VTxxx, SQL, Ingres, Informix, Oracle databases, as well as other data sources via COM/DOM interfaces.

Customizable templates

ConsoliData lets you apply different HTML templates for single users and workgroups.

Development environment support

ConsoliData extends your primary development environment (Microsoft Visual Studio, .NET, C++, C#) to access host-based information.

HTE

NDI ConsoliData's Host Translation Engine (HTE) is the foundation stone of ConsoliData. HTE provides a central point of administration for session management, security, auditing and general management control of all of ConsoliData's activities.
