

UniForm®

Encounter-based Mobile Data Framework

Powerful **Mobile** Policing

Talk to us about:

- ✓ Stop/Search
- ✓ Crime Recording
- ✓ Domestic Crime
- ✓ Local Intelligence
- ✓ Fixed Penalty Notices
- ✓ Collision & Accident Reports
- ✓ HO/RT1
- ✓ VDRS
- ✓ *Your custom requirements*

NDI is the leading provider of mobile data and associated consultancy to the police service. To meet the demands of modern, efficient, frontline policing, NDI has developed UniForm®, a Mobile Data Software Framework containing a suite of expandable mobile data applications with fully integrated management and auditing reports.

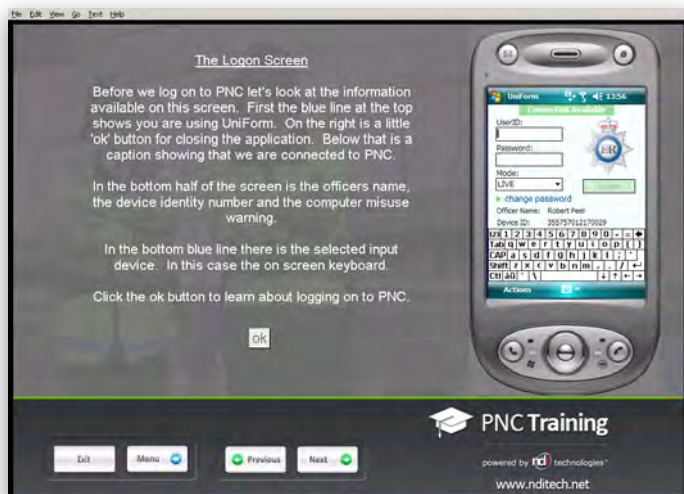

UniForm can automatically integrate PNC, Voters (QAS) and Local Intelligence information into your business process where appropriate.

To increase efficiency, the officer enters or captures the encounter information only once, and this automatically populates all relevant fields in the relevant form.

UniForm is a proven, extensible framework which can grow as your business requires.

UniForm enables officers to **receive and capture** information appropriate to the business task.

- › Pre-populates search results data directly into forms (e.g. PNC data into a StopSearch form).
- › Multiple searches can be performed against different databases simultaneously from a single screen (e.g. PNC, Local Intelligence and QAS Voters).
- › The Local Intelligence search is even capable of retrieving images if they are held on the database, enabling officers to effect immediate identifications.
- › Forms can be created, edited and printed on or off-line.
- › Smart Client software can be easily deployed, managed and upgraded Over-The-Air.
- › UniForm Framework allows rapid development and deployment of standard or tailor made forms, enabling easy integration into your current or future business processes.

Matching e-Learning CBT

NDI is a Gold Standard Accredited Training Provider of the Institute of IT Training (IITT). Several of our PNC e-Learning packages have been approved by NPIA, including the UniForm CBT programme. This means we can provide standard or tailored Computer Based Training (CBT) to help alleviate abstraction issues, which can be a barrier for mobile data projects.

NDI's e-Learning packages include unique "track 'n' trace" facilities that allow administrators to see exactly which screens have been viewed by which users and how often, along with who has (or has not) passed the final assessment module.

Other Key Features

- › UniForm is available for a broad range of BlackBerry and Windows Mobile devices (in any orientation) - with optional printing - providing you with flexibility and choice. UniForm can also be utilised on In-Car MDT's (Mobile Data Terminals).
- › Integration with existing policing systems allows a two-way flow of information.
- › UniForm Administrator tool allows quick and easy management of thousands of devices/users. Deploy and upgrade UniForm OTA (Over-The-Air) and specify which users get which applications.
- › Powerful auditing and reporting means you can measure the success, use and effectiveness of your mobile data deployment. UniForm can generate standard reports so you can see, for example, how many PNC or StopSearch checks were performed by officer, shift or time of day, as well as demographic and diversity reports. In addition to the pre-built reports, NDI can work with you to tailor reports to your specific requirements.
- › By using a central Framework architecture, UniForm has been created to allow new applications (forms or systems) to be generated and integrated easily and with minimum of fuss. This also allows all UniForm applications to take advantage of UniForm techniques including:
 - All Enquiry Search Results being displayed in a single list;
 - Replication of user forms to the staging database with off-line capability;
 - New applications can be made available, and then deployed to the officer without having to return to base;
 - A standard Day and Night Colour scheme.
